2 MEASUREMENT GATES WITH ADVANCED MEASUREMENT MODES

Two user-selectable gates for flaw detection, decoupling with individual settings for measurement mode, location and alarm settings. Displays trigonometric values for all 2 gates: height (H), depth (D), beam path (B), and surface distance (S).

DISTANCE AMPLITUDE CURVE (DAC)

Defect evaluation by plotting upto 15 point custom DAC curve with either a smooth parabolic curve or a simple point-point curve. 6 settable offset curves upto ± 100 dB.

FlexiDGS

Used for comparison & evaluation of echoes against standard DGS curve for a particular type of probe. The DGS curve represents relation between echo height, defect size & distance from transducers. DGS option sets the scale as per the test range, so no more compromising to fixed scale.

CONVENIENT ON-BOARD REPORTING

On-board PDF reporting with custom logo, remarks/job details. Transfer this directly on-site to a flash drive for printing, without a need of a PC software.
